Commit →

Case1: if you want to create a new repo from scratch

git init - new repo create

git add README.md ----- To add newly created files into local repo (.git)

git commit -m "first commit" - To commit all the files into local repo

git remote add origin https://github.com/Mshaveta/GithubDemoClass.git --- to establish the conect with remote repo

git push -u origin master ---- To push the code into Remote repo (Github)

Case2: Cloning /copy the Remote Repo on Local ma/c and piush the code

git clone <repo url>
git add README.md ----- To add newly created files into local repo (.git)
git commit -m "first commit" - To commit all the files into
git push -u origin master ---- To push the code into Remote repo (Github)
